Distributed openNetVM

• • •
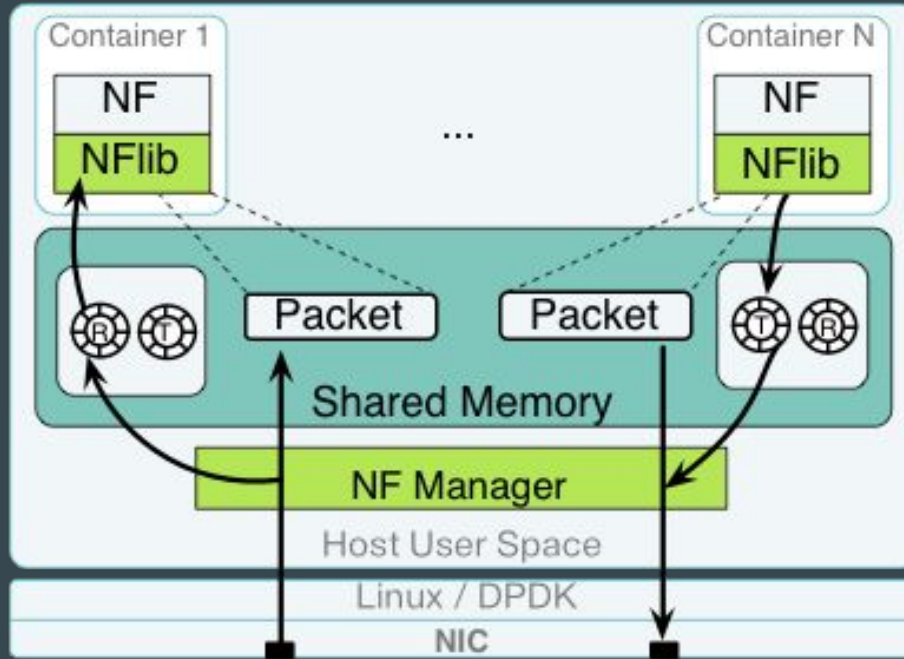

a high performance network function virtualization platform
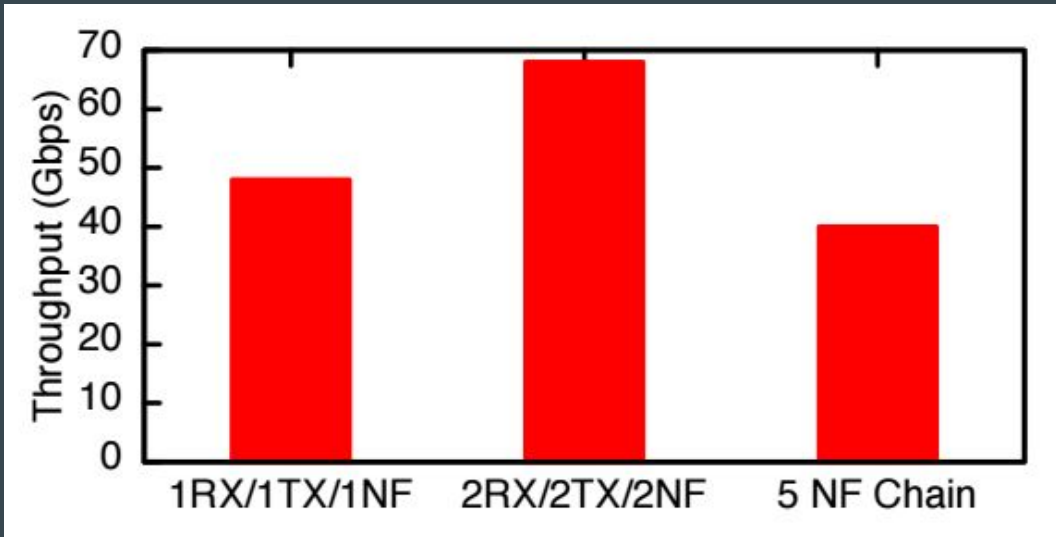

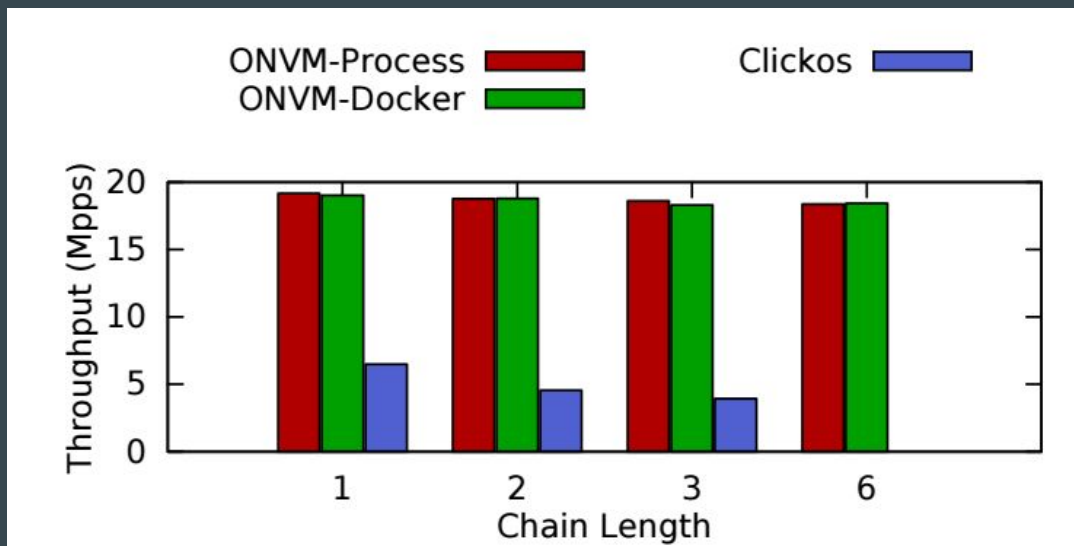

networks are expensive

openNetVM is better

openNetVM is more flexible

openNetVM is faster

openNetVM is faster

scaling is hard

openNetVM is distributed

- Instances of the manager can coordinate
  - Route packets to remote instances when the destination service is not found locally

- Allow wider horizontal scaling with minimal performance impact
  - Take the revolutionary openNetVM platform and build a cluster

- Provide even smarter allocation of resources
  - Auto start and stop NFs and balance them among the available machines
